

Full Stack Developer

Location: Bay Area

Responsibilities:

- Building responsive web sites that touch millions of users worldwide
- Work on different designs, implementations across the entire layers of an n-tier architecture stack:
- defining Web Controllers; writing Spring services & delegates; working with different scopes; binding data to the UI layer
- building RIA (Rich Internet App) UI Interfaces as Dynamic components using advanced JavaScript frameworks (web components)
- appropriately exposing different microservices/applications that are independently deployable
- Work with databases, distributed systems, microservices, message bus/queues, etc.
- Quality of code: All code written code must meet technical quality standards
- Work closely with Technical Leads, Architects, other Software Engineers, and Quality Engineers in a highly collaborative environment
- Take active participation in all Agile ceremonies, including standups, story planning, iterative development, estimations and design sessions
- Build instrumentation and metrics for monitoring and alerting systems providing appropriate health-checks

Required Technical Skills:

- Minimum 5-7 years of hands on full cycle Web Development/J2EE/UI/Front end development experience
- Strong with Spring core/boot/mvc/transaction/jms etc. across various Spring versions
- Experience with Java/J2EE tech stack - capable to write Rest services and expose them securely
- Experience designing and executing responsive web applications
- Experience building Java web applications, JSP, Spring, XML, Xpath, JSON and with J2EE application servers (Tomcat), Apache httpd rewrite engine & rules
- Advanced GIT skills over CLI, also SVN
- Knowledge on Advanced JavaScript, AJAX, JSON, JS frameworks, HTML5, Web Components, CSS3 and User Interface Standards Principles
- Unit Testing for each line of new code introduced

- Peer code review process using GIT Pull Requests & Crucible (for SVN)

Desirable Skills:

- In depth knowledge of Free marker Templates & writing macros in ftls
- DOJO Tool Kit
- Experience with NodeJS, ExpressJS, GruntJS, Bower and NPM is highly preferable
- Webpack / grunt, CSS SASS
- Manage versioning of web assets such as graphics, HTML templates, and style sheets in the repository
- Functional design and development of RIA (internet rich applications), enhance application performance and provide troubleshooting support using AJAX, XSL, XSLT, CSS, JavaScript, DHTML and XHTML for all

Education :

- Bachelor's degree in Computer Science/Engineering or related fields is a must.
